Overview

- Our organization's core mission is to support Pataxó communities in southern Bahia by promoting their culture and generating income through their own cultural traditions, including traditional food, rituals, handicrafts and ceremonies, while also providing free medical and dental care. We also plan to create a dedicated learning area for children in Aldeia Velha, Arraial d'Ajuda, as well as accommodation for the doctors and dentists who will provide care in the community.

Actions to Be Taken:

1

- Build a space for traditional Pataxó rituals and ceremonies. The site will include a traditional-style structure made of wood and thatched roofing.

2

- Build accommodation for medical and dental professionals during their visits to the community. The visits will be coordinated by Beatriz (Em Boas Mãos NGO).

3

- Provide a dedicated learning space for Pataxó children, where they can study the Pataxó language and develop traditional handicrafts.

4

- Develop social media channels and campaign materials to promote visits to the Indigenous community, allowing tourists to learn more about Pataxó culture. Both tourism and handicraft sales are intended to generate income for the community while expanding awareness of its culture.

Project Objectives

- The project has two main objectives.
- Provide medical and dental care to Pataxó communities in southern Bahia.
- Preserve and promote Pataxó Indigenous culture to a broader audience while generating income for the community through its own culture, including handicraft sales, traditional food and visits to the ceremonial center, helping ensure the continuity of its traditions.

Pataxó History

- The Pataxó live in several villages in the far south of Bahia and northern Minas Gerais. Evidence indicates that the village of Barra Velha has existed for nearly two and a half centuries, since 1767. In contact with non-Indigenous people since the 16th century and often forced to conceal their customs, the Pataxó today work to revitalize their Patxohã language and ancestral rituals such as the Awê.

Pataxó History - Language

Pataxó belongs to the Macro-Jê linguistic stock and the Maxakalí language family. Strictly speaking, the original Indigenous language is no longer spoken, with communication taking place in Portuguese mixed with Indigenous vocabulary. However, significant efforts are underway to reconstruct Patxohã, the “Language of the Warrior” (Bomfim, 2012), based on vocabulary recorded by chroniclers and travelers.

Pataxó History - Indigenous Games

The Pataxó Indigenous Games are seen by the community as a way to reinforce awareness of their people and their place in Brazil's history. They are recognized as a successful cultural initiative and as the largest Indigenous sporting event in Northeast Brazil. Thousands of tourists and local residents consider the event one of Porto Seguro's main attractions at that time of year and an opportunity to engage with the Pataxó community, which opens the reserve to visitors.

Needs

- To complete the project, several needs must be addressed, ranging from construction materials for the ritual spaces to resources required for laboratory testing.

- 01 | Purchase of wood for construction
- 02 | Purchase of beds and sanitary fixtures for the accommodations
- 03 | Partnership with a laboratory to perform tests
- 04 | Materials for medical and dental care
- 05 | [To be defined]

Proposed Solution

- At this stage, we are seeking financial support to purchase the materials required for construction, as well as partnerships with laboratories, medical-supply providers and the Municipality of Porto Seguro.

Process

Community Visit and Local Partnerships

- The first step is to visit the community to identify its main medical and dental care needs, define the areas required for the cultural and healthcare facilities, and establish local partnerships.

Construction Begins

- Define and begin construction of the spaces for ceremonies and medical and dental care, while establishing schedules for cultural activities and healthcare services.

Activities Begin

- At this stage, medical and dental appointments and treatment will begin, while the community will also open to visitors for ceremonies, traditional meals and handicraft workshops.

Beatriz Guedes - Co-Founder

Priscila Guedes - Co-Founder

Renato Borges

Beatriz Guedes

Priscila Guedes

Renato Borges

FOUNDER

- Advertising and Marketing professional with a postgraduate degree in Communication Management. Founder of the NGO “O Cocar de um Indígena,” who lived with the Pataxó people and experienced their culture and traditional customs firsthand.
- Responsible for the NGO’s cultural planning, fundraising and mapping of community needs, as well as developing initiatives and campaigns aimed at preserving Pataxó Indigenous traditions.

Beatriz Guedes

- CO-FOUNDER
- Attorney specializing in medical, dental and hospital law, graduated from FMU. She founded the Em Boas Mãos NGO with the goal of helping people who struggle with low self-esteem.
- The NGO, which was featured on Rede Globo's Fantástico program, brings together professionals who provide medical care and reconstructive procedures to help underserved men and women regain their well-being and develop a new relationship with their self-image.

Priscila Guedes

CO-FOUNDER

- Civil Engineer and co-founder of the Em Boas Mãos NGO. She facilitates communication between the organization and potential partners and supports the development and implementation of architecture and construction projects required by “O Cocar de um Indígena.”

Projects

- Our project includes several areas open to visitors, including food, events, handicrafts, Indigenous medicine and accommodation (hostel and traditional dwellings).
- Each area will have its own visual design aligned with Pataxó cultural standards. A team of engineers will study and apply this identity to the architectural and construction projects. Contemporary materials may be used as long as they do not harm the environment or compromise Pataxó cultural identity.

Shaman Accommodation Project

- These images focus on the accommodation project located on the property of the community's Shaman. On this 100 m x 35 m site, the goal is to build traditional dwellings designed for couples and small families with up to two or three children.
- The plan is to create up to eight accommodation units plus a kitchen for guests, divided into five dwellings for couples and three for families.

Hostel Project

- This project focuses on hostel accommodation. On this 80 m x 40 m site, the goal is to create a space aimed at a younger audience, with a bar, restaurant, social area, shared dormitories and rooms for couples.
- Planned maximum capacity: up to 30 guests.

Food & Events Area Project

- This will be the largest and busiest area in the community. It will feature a food court with restaurants serving traditional Pataxó dishes and broader Bahian cuisine, as well as handicraft displays and sales and a central area for traditional dance performances. The site measures 100 m x 120 m, with commercial spaces along the sides and the events area in the center.
- Around the performance area, visitors will be able to purchase traditional food and handicrafts and use dedicated dining spaces. This will be the heart of the community's visitor experience, a meeting point where other activities will also be announced. Care and dedication will be essential.

Indigenous Reserve Project

- The Pataxó Indigenous reserve is located in an area of exceptional natural beauty. Several areas could potentially support accommodation integrated into the forest, as well as a restaurant and handicraft workshop.

Thank You!
